Floating Folding Gate

The suspended folding door is a new type of access control system that combines the space-saving advantages of folding doors with the efficient and smooth opening and closing mechanism of suspended doors. It features a suspended design, folding function, automation, and reduced wear and tear.

Description

Size: Custom Size

Material: Aluminum Alloy

Surface Treatment: Powder Coated

Type: Double Gate

Usage: Outdoor

Features

✔ Frameless Corner Design for a Brighter View

Abandoning the traditional corner pillar, the two doors seamlessly connect, creating a completely enclosed space when closed and a spacious corner opening when open, offering unobstructed views and enhanced natural light.

✔ Sturdy, Durable and Well-Sealed

The frame is made of thickened aluminum alloy, offering high strength, wind pressure resistance, and rust resistance. Combined with double-layered tempered glass and sealing strips, it provides sound insulation, heat insulation, waterproofing, and dustproofing, enhancing home comfort.

✔ Smooth Push-Pull Experience

Equipped with silent rollers and high-strength tracks, the doors slide smoothly and effortlessly without jamming or noise. They are resistant to deformation and derailment even after long-term use, requiring minimal effort to open and closing securely.

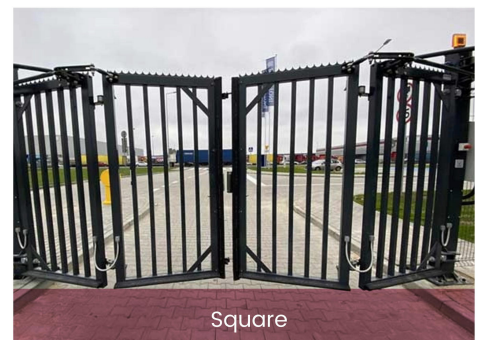

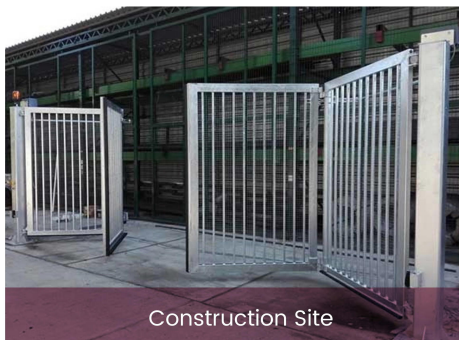

✔ Customizable to various styles

Supports ultra-narrow bezels, multi-color spraying, and customizable options such as frosted, transparent, and non-frosted glass. It can match modern, minimalist, light luxury, and Nordic decorating styles. Sizes can be customized to your needs, perfectly fitting corner apartments.

✔ Space-Saving and Minimal Footprint

Utilizing a side-sliding storage design, the doors conceal themselves against the wall when open, saving space in hallways and living areas. Suitable for small apartments and compact spaces.
