## Isolation Warehouse Fence

Isolation Warehouse Fence, also referred to as industrial safety fencing or workshop partition system, serves as a versatile and reliable solution for creating safe and organized spaces within industrial environments. Typically constructed using industrial aluminum profiles as the primary frame, these fences eliminate the need for expansion screws, enabling quick and non-intrusive installation. The framework is combined with various infill options such as wire mesh, transparent acrylic panels, or aluminum composite sheets, offering both visibility and durability. This modular design ensures that the fence can be tailored to meet specific functional and spatial requirements while maintaining a high level of stability and load-bearing capacity.

## DESCRIPTION

Customization is a key advantage of Isolation Warehouse Fence, with grid sizes and colors available to suit different application scenarios. Commonly used mesh configurations include 20×100, 30×30, 40×40, and 50×50, allowing users to balance transparency, ventilation, and safety. In addition, a range of color options—such as yellow, gray, and black—enables the fence to align with corporate branding or safety coding standards. This flexibility makes it an ideal choice for areas requiring machine guarding, workstation separation, or pedestrian pathway definition in warehouses, workshops, and automated production zones.

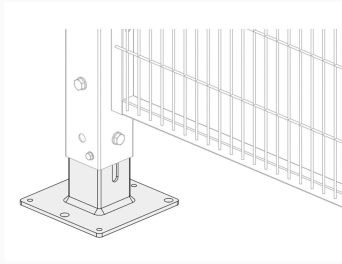

Widely applied in logistics centers, manufacturing plants, and robotic workcells, Isolation Warehouse Fence enhances operational safety without compromising accessibility or visual management. Its robust yet lightweight structure provides an effective barrier against unauthorized access or accidental contact with machinery, while still allowing supervisors and operators to maintain clear sightlines. Easy to assemble, reconfigure, and expand, this fencing

Photo	Name	Specifications		
		Panel Height	Mesh	Panel Length
	warehouse isolation	1.03m	50*200mm,50*100mm, 75*150mm	Customized

## Package & Delivery

PACKAGE

DELIEVRY

## FEATURES & APPLICATION

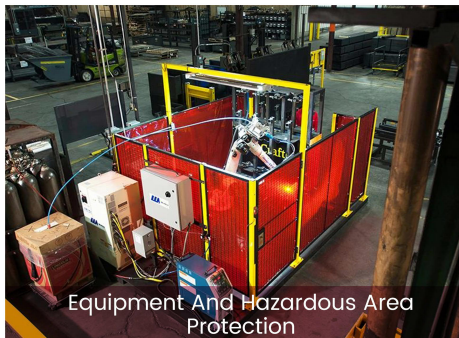

### FEATURES

- Good protective property, small footprint, increased effective space, light transmittance, low requirement for auxiliary lighting.
- The structure is original and dignified with outstanding overall stability; All parts are highly effective against rust treatment and enjoy a long service life.
- It is easy to install and maintenance.

### APPLICATION

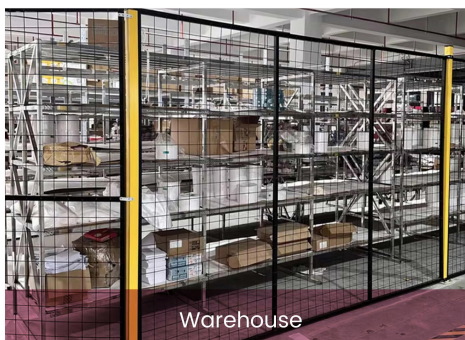

Enterprise Functional Area Division

Equipment And Hazardous Area Protection

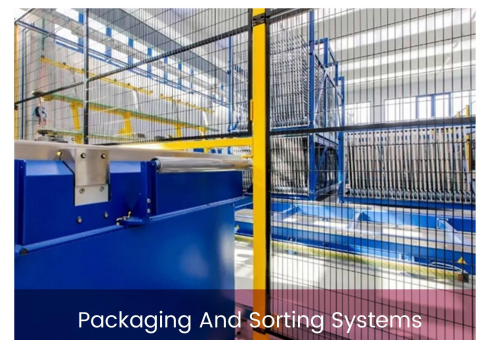

Production Workshop

Warehouse

Laboratory

Packaging And Sorting Systems
