Sheep Loading Ramp

A Sheep Adjustable Loading Ramp is a specialized piece of equipment used in farming, particularly for the safe and efficient loading and unloading of sheep onto trucks, trailers, or pens. The adjustability feature makes it versatile for different heights and angles, ensuring smooth transitions and reducing the risk of injury to the animals. Customisable height and angle to suit different vehicles and loading requirements.

DESCRIPTION & CATEGORY

3200mm long x 650mm wide x 3150mm high

Race: 3200mm x 550mm

The height of the floor is adjustable

Minimum adjustable height 400mm

Maximum adjustable height 1200mm

Sheeted to protect the sheep legs and heads

The walkway is 300mm wide

The height of the walkway is also adjustable

Fully Galvanised

Different Style:

Adjustable Sheep Loading Ramp

Heavy Duty Loading Ramp

Mobile Sheep Loading Ramp

Portable Sheep Load Ramps

Knock Down

FEATURES & APPLICATION

FEATURES

✔ Height Adjustment

The ramp can be adjusted to different heights to align with various truck or trailer levels. This helps ensure that the sheep can easily walk on or off without having to leap or struggle.

✔ Durability

Typically made from heavy-duty materials such as steel or aluminum, it is designed to withstand the weight of both the animals and the handlers.

✔ Width & Slope Adjustment

It often features adjustable width and slope angles to accommodate various flock sizes and to make sure the sheep feel comfortable while walking up or down.

✔ Portable/Collapsible Design

Some models are portable and can be folded or disassembled for easy storage and transport. This is especially helpful for farmers who need to move the ramp between different locations.

✔ Non-Slip Surface

The surface is designed to minimize slipping, providing better traction for the sheep, especially when the ramp is wet or the animals are nervous.

✔ Safety Features

Many ramps include guardrails, smooth edges, and proper angles to prevent sheep from jumping off or getting stuck, which could cause injuries.

APPLICATION

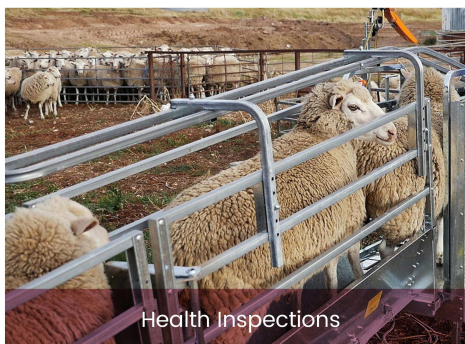

Breeding or Show Events

Farmyard Movement Between Pens

Fodder or Feed Delivery

Health Inspections

Livestock Transport

Slaughter
